PDF

this is our project brief and logo for our sport coaching tool web app. Please can you give me some creative names for the app

Your brief is broader than just a stats app: it combines **live event tracking, athlete management, coaching, scheduling, collaboration, comparisons, and offline syncing**, so I'd choose a name that still works if you build it for different sports later. [RBm0e4-sport_coaching](#)

The blue/green logo also gives a strong sense of **movement, flow, speed, and connection**, which opens up some good naming directions.

My strongest options

Name	Why it works
Athlora	Modern, brandable blend of <i>athlete</i> + a softer tech-style ending. Works across sports.
PlaySync	Captures live event tracking, collaboration and syncing between coaches/assistants.
CoachFlow	Fits the flowing logo and the whole coaching workflow: roster → events → stats → analysis.
GamePulse	Suggests seeing what is happening in a match/event live. Great for a dashboard-focused app.
SportFlow	Very aligned with the logo and broad enough for almost any sport.
AthletiQ	Athlete + IQ. Gives the app an intelligent analytics/performance feel.
SquadSync	Strong if your app revolves around teams, assistants, athletes and shared event data.
Playbook	Very intuitive for coaches: planning, events, athletes and performance.
Formly	Based on athlete <i>form/performance</i> . Simple modern SaaS-style name.
Momentum	Strong sporting meaning and fits the movement represented by the logo.

More distinctive / startup-style names

- **Moviq** — movement + IQ
- **Athlio** — athlete-inspired, short and app-like
- **Sportiq** — sport + intelligence
- **Paceon** — pace + "on"; feels active
- **Playza** — playful and energetic
- **Athlix** — athletic + analytics feel
- **Coachio** — friendly, obvious coaching association

- **Movana** — movement-oriented and softer sounding
- **Performiq** — performance + intelligence
- **Kinetiq** — from *kinetic*, meaning movement
- **FluxSport** — constant movement/data updating
- **Statio** — statistics-focused without being too literal

Names centred around the live-event feature

The brief puts a lot of emphasis on coaches or assistants recording scores, penalties and actions **as the event happens**, rather than adding stats later.  For that side of the app, I like:

- **PlayPulse**
- **LiveForm**
- **GameFlow**
- **EventPulse**
- **MatchFlow**
- **PlayTrack**
- **SportPulse**
- **GameLine**
- **LiveEdge**
- **FieldPulse**

Names centred around coaching + teams

- **CoachGrid**
- **CoachBase**
- **CoachHub**
- **Squadly**
- **SquadIQ**
- **TeamFlow**
- **TeamPulse**
- **Rosterly**
- **RosterIQ**
- **CoachLink**
- **SquadLink**
- **CoachSync**

My top 6 with your logo

If I were actually branding the project, I would narrow it down to:

1. Athlora

Probably my favourite. It looks like a genuine product name rather than a university project name.

Athlora
Coach. Track. Perform.

2. PlayPulse

Really fits the live-data aspect.

PlayPulse
Every moment matters.

3. CoachFlow

Probably the clearest combination of your logo and functionality.

CoachFlow
Your team. In motion.

4. SquadSync

Especially strong because your advanced requirements involve multiple assistants recording an event simultaneously and syncing their data. 

SquadSync
One team. One view.

5. AthletiQ

Best if you want the product to feel more analytical/technical.

AthletiQ
Performance, understood.

6. GamePulse

Probably the strongest sporting name visually alongside your current logo.

GamePulse
Stay inside the game.

One direction I especially like

Looking at the logo itself, I think **PlayPulse** or **Athlora** fits it better than something very literal like "Sports Coaching Tool."

The icon feels like it could represent an athlete **running/swimming/moving while also forming two interconnected paths**, which works nicely with the idea of coaches, athletes and assistants all contributing to one platform.

If this were my project, my shortlist would therefore be:

Athlora → PlayPulse → CoachFlow → SquadSync → GamePulse

And **Athlora** would be my first choice if you want it to look like a polished real-world startup rather than an academic project.
